Question

The value of the convolution of $f(x) = 3\cos(2x)$ and $g(x) = \frac{1}{3}\sin(2x)$ where $x \in [0, 2\pi)$, at $x = \frac{\pi}{3}$, is (Rounded off to 2 decimal places)

Solution

$$f(w) = 3\cos(2w) \tag{1}$$

$$= \frac{3}{2}e^{j2w} + \frac{3}{2}e^{-j2w} \tag{2}$$

$$f(w) = \sum_{k=-\infty}^{\infty} c_k e^{-jwk} \tag{3}$$

by comparing (2) and (3)

$$c_2 = c_{-2} = \frac{3}{2} \tag{4}$$

$$c_k = 0 \quad o.w \tag{5}$$

$$g(w) = \frac{1}{3}\sin(2w) \tag{6}$$

$$= \frac{1}{6j}e^{j2w} - \frac{1}{6j}e^{-j2w} \tag{7}$$

$$g(w) = \sum_{k=-\infty}^{\infty} d_k e^{-jwk} \tag{8}$$

by comparing (7) and (8)

$$d_2 = \frac{-1}{6j} \tag{9}$$

$$d_{-2} = \frac{1}{6j} \tag{10}$$

$$d_k = 0 \quad o.w \tag{11}$$

The periodic convolution is multiply Fourier series coefficients is c(n)=c(k)*d(k)*p

$$c_2 = c_2 * d_2 * p \tag{12}$$

$$= \left(\frac{3}{2}\right)\left(\frac{-1}{6j}\right)(2\pi) \tag{13}$$

$$= \frac{-\pi}{2j} \tag{14}$$

and

$$c_{-2} = c_{-2} * d_{-2} * p \tag{15}$$

$$= \left(\frac{3}{2}\right)\left(\frac{1}{6j}\right)(2\pi) \tag{16}$$

$$= \frac{\pi}{2j} \tag{17}$$

$$f * g(x) = \sum_{n=-N}^{N} c_n e^{-j\frac{2\pi nx}{p}} \tag{18}$$

$$= c_{-2}e^{j2x} + c_2 e^{-j2x} \tag{19}$$

$$= \frac{\pi}{2j}e^{j2x} - \frac{\pi}{2j}e^{-j2x} \tag{20}$$

$$= \frac{\pi}{2j}\left(e^{j2x} - e^{-j2x}\right) \tag{21}$$

$$= \frac{\pi}{2j}(\sin(2x)2j) \tag{22}$$

$$= \pi\sin(2x) \tag{23}$$

$$\tag{24}$$

at $x = \frac{\pi}{3}$

$$= \frac{\sqrt{3}\pi}{2} \tag{25}$$

$$\approx 3 \tag{26}$$

Therefore the convolution of f(x) and g(x) is 3
